### **Brief Introduction of Company and the Product/Services Provided**

Beeye is a technology-forward software that leverages AI to help automate, streamline, and simplify workflows, improving client delivery and enhancing the employee experience. With an all-in-one, user-friendly interface, patterns and trends in workforces are easily identified, decisions are data-driven, and task assignment and hiring are as simple as can be.

During this webinar, we will share how AI systems can be used to drive employee workforce management. Are you tired of relying on manual scheduling processes for your employees? Want to improve employee satisfaction and productivity? Auditing, consulting, and accounting firms struggle to gain visibility of who is doing what, create a more cohesive team, standardize projects, and be aware of late ones.

During this webinar, we will share some of the experiences we have gained from working with our clients and how we are evolving our solution to bring value to customers.

**Does the company serve clients in the U.S. only; or worldwide?** Used by over 250 accounting firms worldwide.

### **Presenters**

#### **Adrien Sicard, Co-Founder & CEO, Beeye**

After a master's degree of Engineering in France and one in Project Management in Canada, he decided to turn to entrepreneurship with two of his friends from school. His role in Beeye? Create a fulfilling environment for Bees (Beeye's employees) and helping Accountants from all over the world to grow their business and the well-being of their colleagues. In his spare time, Adrien loves travelling and spending time in nature with family and friends.

#### **Mathieu Albert, International Sales & Partnerships, Beeye**

Mathieu has a background in economics and a decade of experience in the B2B software industry. He has worked with a wide range of companies ranging from startups to large exchange traded companies. In his spare time Mathieu is an avid golfer and loves to travel.
