

# Cloud Backup Built for High-Stakes Accounting Firms

Protect your clients. Power your practice.

As accounting firms increasingly rely on cloud platforms like Microsoft 365, QuickBooks Online, Box, Sage, Xero, and numerous other SaaS apps, protecting sensitive data and maintaining compliance goes beyond IT, it's a matter of safeguarding your firm's reputation.

Because accuracy, trust, and compliance aren't optional, your SaaS backup strategy shouldn't be either. That's why firms choose SysCloud. From client records and financial data to internal collaboration tools, SysCloud ensures your cloud environments are always protected, recoverable, and audit-ready.

By providing full visibility, automated backup, and rapid recovery, SysCloud empowers your team to reduce downtime, meet compliance demands effortlessly, and focus on what matters most—delivering trusted financial services.

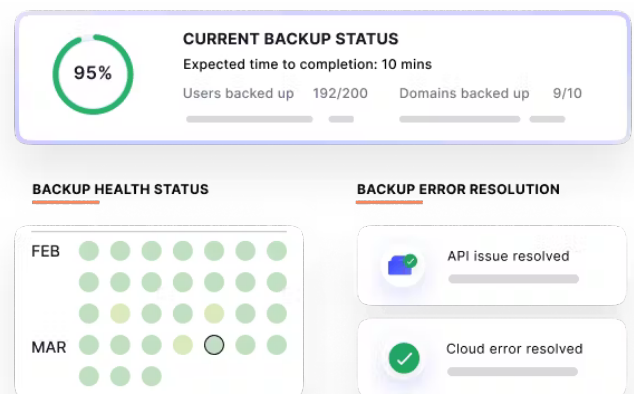

## Full Visibility into the Health of Your Backups

The intuitive dashboard delivers real-time insight into backup status, progress, and error resolution across all your critical platforms. This centralized view lets IT leaders monitor backup health at a glance so nothing falls through the cracks.

Unlike native backup tools that offer limited visibility and siloed data, SysCloud provides comprehensive cross-platform oversight for QuickBooks Online, Box, Microsoft 365, Sage, Xero, and more SaaS apps. From live progress snapshots to historical backup health and resolved API issues, your team can act quickly and confidently, all from one place.

When your team can proactively monitor the health of your backups, you reduce fire drills, speed up audit response times, and eliminate blind spots that lead to risk.

It's not just about seeing your data—it's about staying ahead of potential failures before they become business problems.

## Security, Compliance, & Control

SysCloud doesn't just back up your data, it strengthens your entire risk posture:

- **Ransomware Protection:** Instantly restore clean snapshots to minimize exposure
- **Anomaly Detection:** Detect suspicious activity early, before it becomes a crisis
- **eDiscovery & Legal Hold:** Enable fast, defensible legal and audit response
- **Audit-Ready Backups:** Built to align with standards like HIPAA, FINRA, and SOC 2

For IT leaders in regulated, high-trust industries, SysCloud offers the controls, automation, and peace of mind that native tools simply can't deliver.

## Deployment That Works for Your Team

SysCloud adapts to your operational model with flexibility and speed:

**Direct to  
Market**

**Guided  
Sales**

**24/7  
Support**

## Outcomes That Matter to Your Firm

With SysCloud, accounting firms reduce operational risk, improve disaster recovery times, and support client trust at scale by:

- Cutting downtime after accidental deletions or SaaS outages
- Proving compliance in audits without scrambling for reports
- Minimizing cybersecurity risk through clean, consistent backup practices
- Giving your team more time to focus on financials—not infrastructure gaps

"Protecting financial data isn't just important—it's essential. SysCloud's proactive backup and recovery keep us secure, compliant, and audit-ready in today's digital landscape."

Jody Padar, The Radical CPA
